(54) Title: PEPTIDES INHIBITING IL-I BETA RELEASE

(57) Abstract

Di-, tri- and tetrapeptides in which the last α -amino acid is based on aspartic acid and attached to a residue A_5 which is H; CF3; $-Z_1-Z_2-Y_2$ wherein each of Z_1 and Z_2 independently is a direct bond or an α -amino acid residue and Y_2 is NH₂, C₁₋₄ alkylamino, di-(C₁₋₄ alkyl)amino or a heterocyclic radical attached by a nitrogen to Z_2 ; $-CH_2-X_1-Y_3$ wherein X_1 is O or S and Y_3 is heteroaryl; $-CH_2-Y_3$; substituted phenyl; ring substituted phenoxymethylene or phenylthiomethylene; ring substituted pyridyloxymethylene; or a radical $-CH_2-X_1-CO-Y_4$ wherein X_1 is O or S and Y_4 is trialkylmethyl or substituted phenyl or pyridyl, in free form or in salt form, have pharmacological activity, e.g. IL-1 β release inhibiting properties.

WO 93/09135 PCT/EP92/02472

PEPTIDES INHIBITING IL-1 BETA RELEASE

The present invention relates to peptides having pharmaceutical utility, processes for their production, pharmaceutical compositions comprising them and their use as pharmaceuticals.

More particularly the present invention provides a compound of formula I

$$R-[A_1-A_2]_n-A_3-A_4-X-A_5$$
 (I)

wherein

- R is hydrogen, an amino protecting group or optionally ring substituted benzyloxy
- A₁ is Val, Leu, Ala, Ile or trimethylsilyl-Ala
- A2 is Phe or Tyr,
- n is 0 or 1,
- A₃ is a direct bond, Val, Leu, Ala, Ile, trimethylsilyl-Ala or a divalent radical of formula (a)

wherein ring A is optionally substituted by hydroxy or C_{1-4} alkoxy,

 A_4 is a direct bond or a divalent radical of formula (b)

$$\begin{array}{ccc} -N & - & CH-CO- \\ & & | & \\ R_1 & & Y_1 \end{array} \tag{b}$$

wherein R_1 is hydrogen or C_{1-4} alkyl, and

Y₁ is the residue attaching to the α-carbon atom of an α-amino acid and optionally protected, -CH₂-CH₂-N(C₁₋₄alkyl)₂, imidazol-2-yl-methyl, benzimidazol-2-yl-methyl, 1H-1,2,4-triazol-3-yl-methyl, pyrazol-3-yl-methyl, indazol-3-yl-methyl or a radical of formula (c) or (d)

$$R_{2}$$
 or R_{4} R_{2} R_{2} R_{4} R_{5}

wherein

each of R₂ and R₃, independently, is hydrogen,
halogen, C₁₋₄alkyl, CF₃ or trityl, at most one
of R₂ and R₃ being H, and
each of R₄ and R₅ independently is hydrogen,
C₁₋₄alkyl, hydroxy, C₁₋₄alkoxy, CF₃, phenyl or
halogen, at most one of R₄ and R₅ being H,
or A₃ and A₄ form together a radical of formula (aa)

wherein Y_1 is as defined above and R_1 and R_{1a} form together $-(CH_2)_m-$ wherein m is 2, 3, 4 or 5, and

· 1.5. 自位性、唯他性证

X is a divalent radical of formula (e₁)

$$-\frac{36}{1}6$$

$$-\frac{1}{1}$$

$$\cos_2 H$$
(e₁)

wherein R_6 is H or C_{1-4} alkyl,

ring B is pyridyl,

and A_5 is hydrogen; CF_3 ; a radical $-Z_1-Z_2-Y_2$ wherein each of Z_1 and Z_2 independently is a direct bond or an α -amino acid residue and Y_2 is NH_2 , C_{1-4} alkylamino, $di-(C_{1-4}al-kyl)$ amino or a heterocyclic radical attached by a nitrogen to Z_2 ; a radical $-CH_2-X_1-Y_3$ wherein X_1 is 0 or S and Y_3 is heteroaryl; a radical $-CH_2-Y_3$; or a radical of formulae (k) to (m)

ring C is phenyl or pyridyl, each of R_7 and R_8 independently is C_{1-4} alkyl, C_{1-4} alkoxy, CF_3 , halogen, nitro or cyano, and each of R_9 , R_{10} and R_{11} independently is nitro, cyano, CF_3 , carbamoyl, CO_2R_{12} , -CH=CH-CN or $-CH=CHCO_2R_{12}$ wherein R_{12} is C_{1-6} alkyl,

X being also a divalent radical of formula (e2)

when As is H, or

2) X is a divalent radical of formula (f),

$$\begin{array}{c|c}
R_6 & O \\
\hline
-N & O \\
CO_2H
\end{array}$$
(f)

and A_5 is $-Z_1-Z_2-Y_2$ or a radical of formulae (k) to (o) as defined above, or OR_{13} or $NR_{14}R_{15}$ wherein R_{13} is $C_{1-12}al-kyl$ optionally substituted by OH or interrupted by O and each of R_{14} and R_{15} is independently hydrogen, $C_{1-12}al-kyl$, $C_{5-7}cycloalkyl$ or benzyl, or

3) X is a divalent radical of formula (g)

$$-N + H$$

$$CO_2H$$

$$(g)$$

and A_5 is $-Z_1-Z_2-Y_2$ as defined above, or 4) X is a divalent radical of formula (h) or (j)

and A_5 is a radical of formulae (k) to (o), $-CH_2-Y_3$ or $-CH_2-X_1-Y_3$ as defined above,

with the provisos that only one of A_3 and A_4 can be a direct bond when n is 0, and each of A_3 and A_4 is other than a direct bond when n is 1.

and the physiologically-hydrolysable and -acceptable esters or amides thereof,

in free form, in salt form or in the form of complexes.

Examples of protecting groups as R are e.g. disclosed in "Protective Groups in Organic Synthesis", T. W. Greene, J.Wiley & Sons NY (1981), 219-287, for example acyl such as acetyl, methoxysuccinyl, hydroxysuccinyl or benzoyl optionally substituted on the phenyl ring with e.g. p-methoxycarbonyl, p-methoxy or p-nitro; alkoxycarbonyl such as t-butyloxycarbonyl; arylmethoxycarbonyl such as 9-fluorenylmethoxycarbonyl or benzyloxy carbonyl optionally substituted on the phenyl ring with p-methoxy, p-nitro, p-chloro or m-phenyl; arylmethyl such as benzyl optionally ring substituted with p-methoxy, p-nitro or p-chloro; or arylsulfonyl such as phenylsulfonyl optionally ring substituted

with p-methyl or p-methoxy, or naphthylsulfonyl optionally ring substituted with e.g. amino or $di(C_{1-4}alkyl)$ amino.

When R is ring substituted benzyloxy, it is preferably benzyloxy substituted with hydroxy or C_{1-4} alkoxy. Preferably R is unsubstituted benzyloxy.

Halogen is preferably fluorine or chlorine.

When A_3 is a substituted radical of formula (a) it is preferably substituted by C_{1-4} alkoxy, preferably in para to -C=0.

By α -amino acid is meant a naturally occurring or commercially available or non natural α -amino acid or an optical isomer thereof. A non natural α -amino acid is an α -amino acid which is not incorporated into a protein under mRNA direction, e.g. β -Nal, a fluoro- α -amino acid such as fluoroalanine, trimethylsilyl-Ala or an α -amino acid such as

wherein n_1 is an integer from 1 to 6 and n_2 is an integer from 1 to 12.

Protecting groups which may be present in Y_1 are groups which protect the 0, S or N functionality in the side chain amino groups of an α -amino acid. N-protecting groups are e.g. as disclosed above for R, or C_{3-5} alkyl such as isopropyl, formyl, a sugar residue such as 1-deoxy-fructosyl or α -glucosyl(1-4)-

ρ

deoxyfructosyl, dihydroxy- C_{3-6} alkyl such as dihydroxypropyl, C_{5-7} cycloalkyl such as cyclohexyl or tropinyl. 0- and S-protecting groups for hydroxy and thiol functionalities are known and may be e.g. methyl, t.-butyl or benzyl.

When Y_2 is a heterocyclic radical, it may be e.g. a 5 or 6 membered ring, e.g. piperidino or pyrrolidinyl.

Examples of heteroaryl as Y_3 include e.g. 5-, 6- or 7-membered unsaturated heterocyclic radicals, comprising at least one nitrogen and optionally further heteroatoms such as N, 0 or S. Preferably Y_3 is heteroaryl comprising from 1 to 4 nitrogen atoms, e.g. pyridyl, triazolyl, tetrazolyl, triazin-dionyl.

In ring B of radical (o), the nitrogen atom may be in o-, m- or para. When ring C in radical (k) is pyridyl, it may be 3-, 4- or 5-pyridyl.

Radicals (e_1) , (e_2) , (f), (g) and (j) are derived from Asp and comprise one asymetric carbon atom and radical (h) comprises two asymetric carbon atoms and accordingly they lead to optical isomerism. It will be understood that the present invention includes all individual isomeric forms and diastereoisomers as well as mixtures, e.g. racemates, unless otherwise stated.

Radical of formula (e_1) attached to A_5 which is hydrogen may exist in both cyclic as well as in non-cyclic form e.g. as follows:

$$-NR_6$$
 CO_2H
 $-NR_6$
 OH
 OH
 OH
 OH

Propert reducing

It is to be understood that where tautomeric forms occur, the present invention embraces both lactol and oxo-carboxylic acid forms, i.e. although compounds of formula I wherein X is a radical of formula (e₁) are defined for convenience by reference to the oxo-carboxylic acid form only, the invention is not to be understood as being in any way limited by the particular nomenclature or graphic representation employed. Similar considerations apply in relation to starting materials exhibiting lactol/oxo-carboxylic acid tautomerism as hereinafter described.

The same considerations also apply to radical of formula (h) which may exist in both linear and cyclic form as follows:

and to compounds of formula I comprising a radical of formula (h) and to the corresponding starting materials.

By the term "physiologically-hydrolysable and -acceptable esters or amides" are meant esters and amides which are hydrolysable under physiological conditions to yield alcohols or amines which are themselves physiologically acceptable, i.e. which are non-toxic at the desired dosage levels.

Such esters or amides are obtained by esterification or amidation, respectively, of a compound of formula I wherein X is a radical bearing a carboxy group. Such esters include esters with an aliphatic or alicyclic alcohol or polyol having 1 to 12 carbon atoms. Such amides include amides with aliphatic amines, e.g. C_{1-4} alkyl amine, C_{1-4} alkoxy- C_{1-4} alkyl amine such as

۶

β-methoxy-ethyl amine, or aniline.

The compounds of formula I may exist e.g. in free form, acid addition salt form or in the form of complexes thereof. Acid addition salts may be formed with e.g. organic acids, polymeric acids and inorganic acids. Such acid addition salt forms include e.g. the hydrochlorides and acetates. Salt forms may also include those obtainable with the carboxylic group present in compounds of formula I, e.g. alkali metal salts such as sodium or potassium, or substituted or unsubstituted ammonium salts. Complexes are e.g. formed from compounds of formula I on addition of inorganic substances, e.g. inorganic salts or hydroxides such as Caand Zn-salts, and/or an addition of polymeric organic substances.

In the compounds of formula I, the following significances are preferred either individually or in any combination or subcombination:

- 1. R is an amino protecting group or benzyloxy, preferably an amino protecting group. R is preferably benzyloxy when n is 0 and A_3 is a radical of formula (a).
- 2. Each of A₃ and A₄ are other than a direct bond.
- 3. n is 0.
- 4. A_3 is a radical of formula (a) when n is 0.
- 5. A3 is a direct bond, Val, Leu, Ala, Ile or trimethylsily-Ala.
- 6. R₁ is hydrogen or methyl, preferably hydrogen.
- 7. Y_1 is the residue attaching to the α -carbon atom of an α -amino acid selected from Ala, Leu, His, Phe, Met, Trp, trimethylsilyl-Ala and optionally side chain protected Arg, Orn and Lys, or Y_1 is a radical of formula (c).

- 8. A_3 and A_4 may also form together a radical of formula (aa) when n is 0.
- 9. m is 2 or 3.
- 10. X is a radical of formula (e_1) and A_5 is other than H.
- 11. X is a radical of formula (g).
- 12. X is a radical of formula (h) or (j).
- 13. R_6 is hydrogen or methyl, preferably hydrogen.
- 14. Z_1 in A_5 is the residue of a natural α -amino acid, preferably of an aromatic/heterocyclic α -amino acid, particularly Pro.
- 15. Z_2 in A_5 is the residue of a natural α -amino acid, preferably an aliphatic α -amino acid, particularly an aliphatic α -amino acid without further functional group, most preferably Val.
- 16. X is a radical of formula (e_1) optionally esterified or amidated and A_5 is a radical of formula (k), (1) or (0).
- 17. X is a radical of formula (e_1) , (h) or (j) optionally esterified or amidated and A_5 is $-CH_2-X_1-Y_3$, preferably $-CH_2-S-Y_3$, or $-CH_2-Y_3$.
- 18. X is a radical of formula (h) or (j) optionally esterified or amidated and A₅ is (k).
- 19. X is a radical of formula (j) optionally esterified or amidated and A_5 is a radical of formula (m).
- 20. Radical of formula (m) is monosubstituted, preferably in

Ļ

para, more preferably it is 4-nitrophenyl.

- 21. All α-amino acid residues present except X have the L configuration. X has the D or L configuration.
- 22. The asymetric carbon in (h) bearing the OH group has the configuration S. Preferably the asymetric carbon in (j) bearing R_6 has the configuration R.

In a series of specific embodiments, the present invention also provides a compound of formula I wherein

- n is 0, A_3 is a direct bond, Val, Leu, Ala, Ile or trime-thylsilyl-Ala, A_4 is as defined above, or A_3 and A_4 form together a radical of formula (aa) as defined above, and
- i) X is a radical of formula (e_1) or (e_2) as defined above and A_5 is H, or
- ii) X is a radical of formula (e_1) or (f) and A_5 is $-Z_1-Z_2-Y_2$ as defined above or a radical of formula (k), (l) or (m) wherein X_1 is 0,
- iii)X is a radical of formula (g) and A_5 is $-Z_1-Z_2-Y_2$, or
- iv) X is a radical of formula (j) and A_5 is a radical of formula (k), (l) or (m) wherein X_1 is 0.

The present invention also provides a process for the production of a compound of formula I, which process comprises:

- a) removing at least one protecting group from a compound of formula I in protected form or adding a protecting group R at the N-terminal group of a compound of formula I; or
- b) converting one compound of formula I into another compound of formula I; or
- c) coupling together by an amide bond two peptide fragments,

each of which contains at least one amino acid in protected or unprotected form and one peptide fragment containing a radical of formula (e₁) to (j) as defined above, the peptide fragments being such that a protected or unprotected peptide having the sequence according to formula I above is obtained and, if necessary, removing the protecting group or groups from a compound of formula I in protected form; or

d) for the production of a compound of formula I wherein X is a radical of formula (e₁) or (h) and A₅ is a radical of formula (k), (l) or (o) or -CH₂-X₁-Y₃, reacting a compound of formula III

$$R-[A_1-A_2]_n-A_3-A_4-X'-CH_2-Z_a$$
 (III)

wherein R, A_1 to A_4 and n are as defined above, X' is a radical of formula (e_1) or (h), and Z_a is a leaving group, e.g. halogen,

with a corresponding phenol, thiophenol or HX_1 -pyridine or an acid of formula HX_1 -CO-Y₄ or a functional derivative thereof or HX_1 -Y₃; or

e) for the production of a compound of formula I

$$R-[A_{1}-A_{2}]_{n}-A_{3}-A_{4}-N$$

$$CO_{2}R_{16}$$
(1)

wherein R, A_1 to A_5 and n are as defined above and R_{16} is a $C_{1-1\,2}$ aliphatic or alicyclic residue, oxidizing a compound of formula V

$$R-[A_1-A_2]_n-A_3-A_4-N$$
 $CO_2R_{1.6}$
(V)

wherein R, A_1 to A_5 , n and R_{16} are as defined above,

and recovering a compound of formula I thus obtained in free or salt form or in the form of a complex.

Processes (a) to (e) above may be carried out in accordance with standard techniques known in the art.

The removal of a protecting group in process step (a) may also include the removal of R on the N-terminal group of a compound of formula I. For example, when R is benzyloxy carbonyl, this group may be removed by hydrogenation in the presence of a catalyst, e.g. Pd.

In accordance with process step (b) for example, for the production of a compound of formula I wherein X comprises a carboxy group, a compound of formula I wherein X comprises an esterified or amidated carboxy group may be hydrolysed. Such hydrolysis may be effected by treatment with an appropriate alkali or by acid hydrolysis, for example in the presence of trifluoroacetic acid.

Furthermore, in accordance with process step (b), for the production of a compound of formula I wherein X comprises an esterified or amidated carboxy group, a compound of formula I wherein X comprises a carboxy group or an esterified caboxy group may be (trans) esterified or amidated. Such ester formation or amidation may be carried out using any of the techniques known in the art, for example converting the carboxy group in a functional

gram a namangilisa

reactive group, e.g. a corresponding carbonyl halide or anhydride, or using a compound of formula I wherein X is a radical of formula (h) in the lactone form, and reacting such group with the selected alcohol or amine.

In accordance with a further embodiment of process step (b), for the production of a compound of formula I wherein X is a radical of formula (g), a compound of formula I wherein X is a radical of formula (e_1) or (e_2) and A_5 is H may be reacted with a compound of formula II

$$H_2N-NH-CO-A_5$$
 (II)

wherein A_5 is as defined above. This process may be carried out in analogy to the known techniques used for the preparation of semi carbazones.

A compound of formula I wherein X is a radical of formula (e_1) may also be converted in accordance with known techniques into a compound of formula I wherein X is a radical of formula (e_2) and vice versa.

Process step (c) may be carried out by the techniques known in the art of peptide chemistry. By peptide fragment comprising a radical of formula (e₁) to (j) is also meant the radical itself bearing a protecting group on the $-NR_6-$ moiety and an appropriate ending, e.g. A_5 or CH_2-Z_a , on the other end.

Process step (d) may conveniently be effected using a Dess-Martin reagent, e.g. in the presence of a base or a halogen-precipitating silver salt, or according to the Swern oxidation procedures.

Where desired, in these reactions, protecting groups may be used for functional groups which do not participate in the reaction.

्रहेत स्ट्रिस्टिंग निम्नीहरू

<u>મું લેક્ક કહેતાઈ ફેર્સ્ટ</u> ક

These may be e.g. amino protecting groups, carboxy protecting groups, acetal groups etc. When the desired reaction is complete, the protecting groups may then be removed.

Each of the above processes may be carried out using starting materials in the form of one or other of the individual optical isomers or in the form of mixtures [relating to the asymetric carbons present in radicals of formulae (e₁) to (j) as X or in such a radical precursor]. Conveniently the starting materials are used as S- or R-enantiomers to produce a compound of formula I wherein the asymetric carbon in radicals of formulae (e₁) to (j) has the S or R configuration, respectively.

The starting materials used in process steps (d) or (e) may be prepared in analogy with process step (c).

Insofar as the production of the starting materials is not particularly described, the compounds are known or may be prepared analogously to methods known and practiced in the art.

The following examples are illustrative of the invention. All temperatures are in °C.

The following abbreviations are used:

THF = tetrahydrofuran

TFA = trifluoroacetic acid

MeOH = methanol

EtOAc = ethyl acetate

DCC = dicyclohexylcarbodiimide

HOBT = hydroxybenzotriazole

Z = benzyloxycarbonyl

r.t. = room temperature

Fmoc = 9-fluorenylmethoxycarbonyl

a = amorph

EXAMPLE 1: Z-Val-Met-Asp(OH)-H

million

Z-Val-Met-Aspartic aldehyde dimethyl acetal-β-tert.butyl ester (1.17 g) is taken up in CH₂Cl₂ (150 ml), TFA (15 ml) and water (1 ml) added and stirred for 2,5 hrs at r.t. The solvent is evaporated, toluene added twice and evaporated again. The crystalline residue is dissolved in water (60 ml) upon heating, decanted from some undissolved material and crystallized at 5 °, affording the first crop of the product: m.p. 117 °. All mother liquors are collected and chromatographed (SiO₂, acetone/hexane/-EtOAc 60/40/0.5) to give a second crop of product, crystallizing upon trituration with water.

EXAMPLE 2: Z-Val-Met-Asp(OH)-H Semicarbazone

Compound of Example 1 (0.27 g, 0.55 mmol) in MeOH (2 ml) is combined with semicarbazide, HCl (0.6 ml of 1 molar solution), then 5 drops of pyridine are added. The product crystallizes after 10 min. at r.t.: m.p. 233 - 235 °.

EXAMPLE 3: Z-Val-Met-Asp(OH)-H semicarbazonyl-Pro-Val-N(CH₃)₂

Compound of Example 1 (0.48 g, 1 mmol) is dissolved in a mixture of MeOH (2 ml) water (0.5 ml) and 3 drops of pyridine. N-(hydrazinocarbonyl)-Pro-Val-N(CH₃)₂ (0.3 g, 1 mmol) is dissolved in MeOH (1 ml), water (2 ml) and 3 drops of 2N HCl. Both solutions are combined and warmed for 2 min. at 40 - 50 °. The product crystallizes upon cooling: m.p. 118 - 120 °.

By repeating the procedure of Example 1, using the corresponding starting materials, following compounds may be prepared:

Example 4 Z-Val-Phe-Asp(OH)-H

Example 5

Z-Val-His-Asp(OH)-H

By repeating the procedure of Example 2 or 3 respectively, using the corresponding starting materials, following compounds of formula IA

$$Z-A_3-A_4-N$$

$$\downarrow \qquad \qquad N$$

$$CO_2H$$

$$O$$

$$NHA_5$$

$$O$$

wherein A_3 , A_4 and A_5 are as defined below, may be prepared.

Example	A ₃	A_4	A ₅	M.P.°C
6	Val	Phe	H	а
7	Val	His	H	150
8	Val	Phe	Pro-Val-N(CH ₃) ₂	126-129
9	Val	His	Pro-Val-N(CH ₃) ₂	
10	Ala-Tyr-Val	Phe	H	205

EXAMPLE 11: (3S)-3-(Z-valyl-phenylalanyl)-amino-5-(2,6-dimethyl benzoyloxy)-4-oxo pentanoic acid

(3S,4RS)-3-(Z-Val-His)amino-4-hydroxy-5-(2,6-dimethylbenzoyloxy) pentanoic acid tert.-butyl ester (0.6 mmol) is treated with Dess-Martin reagent (0.77 mmol) in CH_2Cl_2 (4 ml) for 45 min. and filtered. Aceton and 0.5 N NaOH are then added and aceton is evaporated. The residual crystalline material is washed with H_2O , acidified with 10 % tartaric acid and extracted with EtOAc. The combined EtOAc extracts affords after evaporation the tert. butyl ester of the product as yellow crystals. These are dissolved in CH_2Cl_2 (4 ml), TFA (4 ml) is added and the mixture is stirred at r.t. for 15 min. The mixture is evaporated to dryness and chromatographed (SiO₂, aceton/hexane/EtOAc 60/40/1) affording the product as slightly colored crystals.

EXAMPLE 12: (Z-valyl-alanyl)-(3R,4S)-3-amino-4-hydroxy-5-(2,6-dichlorbenzoyloxy)

(Z-valyl-alanyl)-3R,4S)-3-amino-4,5-dihydroxy pentanoic acid ethyl ester and 4-dimethylaminopyridine are dissolved in pyridine and 2,6-dichlorobenzoyl chloride is added dropwise. The reaction mixture is stirred overnight at room temperature, then ice and water are added and the mixture is extracted with AcOEt. The organic layer is washed with water, then with NaCl solution, dried over Na₂SO₄, filtered, evaporated, and the crude product is chromatographed to give the title compound.

The (3R,4RS) derivative of the title compound may be prepared as follows:

Z-Val-Ala-OH (0.26 mmol), DCC (53 mg, 0.26 mmol) and HOBT.H₂O (39 mg, 0.26 mmol) are dissolved in THF/DMF (2 ml/2 ml) and stirred for 5 min., before (3S,4RS)-3-amino-4-hydroxy-5(2,6-dimethylbenzoyloxy)-pentanoic acid tert.butyl ester (87 mg, 0.26 mmol) in THF (2 ml) is added. The reaction mixture is stirred overnight at r.t., evaporated and chromatographed (SiO₂, EtOAc/MeOH/NH₃ 95/5/0.5) to afford the (3R,4RS) title compound.

EXAMPLE 13: (Z-valyl-alanyl)-(3R)-3-amino-4-oxo-5-(2,6-dichloro-benzoyloxy) pentanoic acid ethyl ester

Dimethylsulfoxide in CH_2Cl_2 is added dropwise to a solution of oxalyl chloride in CH_2Cl_2 at $-50\,^{\circ}$ C. After 15 min., a solution of compound of Example 12 in CH_2Cl_2 is added dropwise and the reaction mixture stirred for 1 hour at $-40\,^{\circ}$ C. Triethylamine is added and stirring is continued for 3 hours at room temperature. Water is then added and the reaction mixture extracted with CH_2Cl_2 . The organic layer is washed with NaHCO₃ solution and

NaCl solution, dried over Na_2SO_4 , filtered and evaporated. The residue is chromatographed yielding the title compound.

By repeating the procedure of Examples 1-3 and 11 to 13, using the corresponding starting materials, following compounds of formula IB

$$Z-A_3-A_4-NH$$

$$CO_2R_y$$
(IB)

wherein A_3 , A_4 , R_{κ} and R_{γ} are as defined below, may be prepared.

EXAMPLE 67: (3RS)-3-(Z-valyl-phenylalanyl)amino-4-oxo-6-(p-nitrophenyl)-transhex-5-enoic acid tert.butyl

(3RS)-3-(Z-Valyl-phenylalanyl)amino-4-oxo-pentanoic acid tert.butyl ester-5-diethylphosphonate (0.2 g, 0.29 mM) is dissolved in THF (15 ml) at 5°C. NaH (25 mg, 0.59 mM) is added and the mixture stirred for 10 min. p-Nitrobenzaldehyde (0.18 g, 1.1 mM) in THF (2 ml) is added at 0°C and the reaction mixture stirred for 45 min. at this temperature. The reaction mixture is poored on 5 % tartaric acid, extracted with ethyl acetate, the organic phases dried over $\rm Na_2SO_4$, evaporated and the product purified by chromatography yielding the title compound.

EXAMPLE 68: Z-Val-Phe-Aspartic aldehyde dimethyl acetal-β-methyl ester

Z-Val-Phe-Asp(OH)-H (0.8 g) is dissolved in MeOH (25 ml) containing 8 % HCl, left at r.t. over night, evaporated to dryness and the residual crystals washed with ether, providing the title compound as white crystals. M.p.: 168 - 171 °.

Starting materials may be prepared as follows:

EXAMPLE 69: (3S)-3-(Fluorenylmethoxycarbonyl)amino-5-iodo-4-oxo butanoic acid tert.butyl ester

Triethylamine (1.3 ml, 9.6 mmol), followed be ethylchloroformiate (0.92 ml, 9.6 mmol) are added to (3S)-3-(fluorenylmethoxycarbonyl)amino-3-carboxy-butanoic acid tert.butyl ester (3.5 g, 8.5 mmol) in THF (60 ml) at - 10 °. After 10 min., a solution of diazomethane in ether is added slowly, and the reaction mixture stirred for 45 min. at 0 - 5 °. HCl (2N) in ether is added at 5 - 10 ° until gas evolution has ceased. The reaction mixture is evaporated to dryness, taken up in acetone (50 ml) NaI (4 g) added

-28-

and stirred for 1 hr at r.t. Ether (150 ml) is added, the reaction mixture filtered and evaporated. The residue is chromatographed (SiO₂, EtOAc/hexane), yielding the title compound as slightly yellow crystals.

EXAMPLE 70: (3S)-3-(Fluorenylmethoxycarbonyl)amino-5(2,6-dimethylbenzoyloxy)-4-oxo pentanoic acid tert.butylester

3S-3-(Fluorenylmethoxycarbonyl)amino-5-iodo-4-oxo-butanoic acid tert.butyl ester (1 g, 1.8 mmol), 2,6-dimethylbenzoic acid (0.5 g, 3.3 mmol) and AgOAc (0.6 g, 3.6 mmol) are dissolved in acetone (25 ml) and refluxed for 1 hr. After filtration and evaporation the crude product is chromatographed (SiO₂, ether/hexane 3/7) yielding the title compound.

EXAMPLE 71: (3S)-3-Fluorenylmethoxycarbonyl)amino-5(4nitrophenoxy)-4-oxo pentanoic acid tert.butyl ester

3S-3-(Fluorenylmethoxycarbonyl)amino-5-iodo-4-oxo-butanoic acid tert.butyl ester (1 g, 1.8 mmol), p-nitrophenol (0.5 g, 3.7 mmol) and K_2CO_3 (0.38 g, 2.8 mmol) are refluxed in acetone (6 ml) for 30 min., CH_2Cl_2 added and the organic phase washed with 2N NaHCO₃. The combined organic phases are dried, evaporated and chromatographed (SiO₂, EtOAc/hexane 2/8), yielding the title compound as a yellow oil.

EXAMPLE 72: (Z-valyl-alanyl)-(3R,4S)-3-amino-4,5-dihydroxy pentanoic acid ethyl ester

a) Ethyl (3R,4S)-3-benzylamino-4,5-(isopropylidenedioxy) pentanoate (Y. Yamada, Tetrahedron Leters 1983, 24, 3009) and 10% Pd/C in ethanol are shaken at r.t. for 30 mn under $\rm H_2$.

Filtration and evaporation of the reaction mixture give ethyl (3R,4S)-3-amino-4,5-(isopropylidenedioxy)pentanoate which is used without further purification.

- b) Z-Val-Ala-OH is dissolved in THF, HOBTH₂O and DCC are added at 5°C. After stirring for 20 min. at 5°C, diisopropylethylamine and ethyl (3R,4S)-3-amino-4,5-(isopropylidenedioxy)pentanoate in THF are added. Reaction mixture is stirred overnight at room temperature, filtered, evapored and chromatographed to afford (Z-valyl-alanyl)-(3R,4S)-3-amino-4,5-(isopropylidenedioxy)pentanoic acid ethyl ester.
- c) Compound 74 b) is dissolved in AcOH/H₂O (75/25) and stirred at 40°C for 4 hours. After evaporation, water is added and the mixture is extracted with AcOEt. The combined extracts are washed with water, NaHCO₃'solution, NaCl solution, dried over Na₂SO₄, filtered and evaporated, yielding the title compound.

The compounds of formula I their physiologically-hydrolysable and -acceptable esters and amides and their pharmaceutically acceptable salts (hereinafter referred to as compounds of the invention) exhibit pharmaceutical activity and are, therefore, useful as pharmaceuticals.

In particular, the compounds of the invention inhibit IL-1 β secretion as indicated in the following in vitro test using THP-1 cells and in vivo test methods:

a) 900 μl THP-1 cells (0.5 x 10⁶ cells) together with 100 U γ-interferon/0.9 ml RPMI 1640 medium (containing 2 mM L-glutamine and 5 % heat-inactivated foetal calf serum) are pipetted into 24 well culture plates. 100 μl of the compound to be tested are then added. After 3 hours at 37 ° C in 5 % CO₂/95 % air, 10 μl lipopolysaccharide 500 μg/ml is added and

the incubation continued for a further 40 hours. Appropriate controls (with and without stimulus, solvent) ar also included. The media are then removed and clarified by centrifugation at 1000 g for 10 min. 1.0 ml digitonin 0.01 % is added to the wells to lyse the cells which are loosened by scraping with a rubber policeman and left at 4 °C for 10 min. Lactate dehydrogenase measurements are then performed immediately and the samples stored at - 20 °C until the other determinations can be made. The assays are: IL-1 β (medium and lysate), IL-6 (medium), TNF- α (medium), PGE2 (medium and lysate), lactate dehydrogenase (LDH) and DNA (lysates). IL-1 β , IL-6 and TNF- α assays are determined using commercially available ELISA kits (Cistron), PGE2 is measured using a standard RIA and DNA fluorimetrically using DAPI.

In this test, the compounds of the invention selectively inhibit IL-1 β release in concentrations from about 0.01 to 100 μ M. In contrast IL-6, TNF- α , PGE2 and DNA levels remain substantially unaffected, and the compounds are non-toxic, since LDH release is unchanged. It has for example been determined that compounds of examples 40 and 50 have an IC₅₀ value (concentration of compound which inhibits to 50% the release of IL-1 β) of 1 and 0.1 μ M respectively.

b) LPS-Fever

A LPS-suspension (Sigma, No. L-5886; 100µg/5ml glucose solution/kg s.c.) is injected in male Tuttlingen SD rats (150-160g). 2 hours later the body temperature is measured using a thermistor rectal probe connected to an ELLAB telethermometer. After 4 hours the test compound is administered p.o. 2 hours later (6 hrs after LPS administration) the temperature is measured again. The temperature increment shown by the untreated controls is taken as 100% and that in

derita in de entire

the treated group is expressed as a percentage of this value. The ED_{50} is the dose causing a 50% inhibition of the temperature increase determined in the control rats. In this test compounds of the invention inhibit the LPS-induced temperature increase when administered at a dosage in the range of from 0.001 to 0.1 mg/kg p.o. It has for example been determined that compounds of examples 40 and 50 have each an ED_{50} value of 0.01 mg/kg p.o. and compound of example 51 an ED_{50} value of 0.05 mg/kg p.o.

c) Carrageenan-Induced Paw Edema in the Rat

50FA male rats, 150-170g body weight, are used for each group. The test compound is administered orally as a suspension in physiological saline/0.5% tragacanth 1 hour prior to the carrageenan injection. Carrageenan (0.1ml of a 1% suspension in physiological saline) is given by subplantar injection into one hind paw. The swelling of the paw is measured by means of an antiphlogometer according to Kemper & Amelm. A control reading is taken immediately after the injection, and the swelling is measured after 3 and 5 hrs. The mean value of the 3- and 5-hour reading is taken after deduction of the control reading, the values obtained from the treated animals are expressed as a percentage of the value obtained from non-treated controls. The ED_{50} is the dose causing a 50% inhibition of the carrageenan-induced swelling after 3 hrs. In this test method compounds of the invention inhibit significantly the carrageenen-induced swelling when administered p.o. at a dosage in the range of from 0.02 to 5 mg/kg. It has for example been determined that compound of example 40 and 50 have an ED_{50} value of 0.2 and 1 mg/kg p.o. respectively.

xQ = tx

Compounds of the invention are therefore useful for the treatment of disorders with an aetiology associated with or comprising excessive IL-1\$\beta\$ release, e.g. in a wide variety of inflammatory states and diseases, for example tissus calcium depletion, degenerative processes in bone and cartilage, e.g. rheumatoid arthritis and osteoarthritis, inflammatory bowel disease, irritable bowel disease, septic shock, psoriasis, asthma, adult respiratory distress syndrome, diabetes type I, osteoporosis of various genesis including e.g. climacteric or post-menopausal osteoporosis as well as osteoporosis consequential to old age, immobilization or trauma, arteriosclerosis and Alzheimer disease.

For the above uses the required dosage will of course vary depending on the mode of administration, the particular condition to be treated and the effect desired. In general however, satisfactory results are achieved at daily dosage rates of from about 0.001 to about 100 mg/kg, preferably 0.001 to about 10 mg/kg animal body weight. Suitable daily dosage rates for larger mammals, for example humans, are of the order of from about 0.1 mg to about 1 g/day, conveniently administered once, in divided dosages 2 to 4 x/day, or in sustained release form.

Compounds of Examples 50 and 51 are preferred.

In accordance with the foregoing the present invention also provides:

a) A method for the treatment of disorders with an aetiology associated with or comprising excessive IL-1β release, e.g. as indicated above in a subject in need thereof, which method comprises administering to said subject an effective amount of a compound of formula I, a physiologically-hydrolysable and -acceptable ester or amide thereof, or a pharmaceutically acceptable salt thereof; b) A compound of formula I, a physiologically-hydrolysable and -acceptable ester or amide thereof or a pharmaceutically acceptable salt thereof, for use as a pharmaceutical, for example for use as an agent, e.g. in the method as disclosed above.

The compounds of the invention may be administered by any conventional route, in particular nasally, enterally, preferably orally, e.g. in the form of tablets or capsules, or parenterally e.g. in the form of injectable solutions or suspensions or in a suppository form. Unit dosage forms contain, for example from about 25 μ g to 500 mg of a compound of the invention.

The compounds of the invention may be administered in free form or in pharmaceutically acceptable salt form. Such salts may be prepared in conventional manner and exhibit the same order of activity as the free compounds.

Furthermore the present invention also provides:

c) A pharmaceutical composition comprising a compound of formula I, a physiologically-hydrolysable and -acceptable ester or
amide thereof or a pharmaceutically acceptable salt thereof,
as hereinbefore defined, together with a pharmaceutically
acceptable diluent or carrier therefor. Such compositions may
be manufactured in conventional manner. They may comprise up
to 99.9% by weight of active ingredient.

But Bernard Hilliam Commence

CLAIM

1. A compound of formula I

34在1节期的期限2000年

$$R-[A_1-A_2]_n-A_3-A_4-X-A_5$$
 (I)

wherein

R is hydrogen, an amino protecting group or optionally ring substituted benzyloxy

n is 0 or 1,

 A_1 is Val, Leu, Ala, Ile or trimethylsilyl-Ala

A2 is Phe or Tyr,

A₃ is a direct bond, Val, Leu, Ala, Ile, trimethylsilyl-Ala or a divalent radical of formula (a)

wherein ring A is optionally substituted by hydroxy or C_{1-4} alkoxy,

 A_4 is a direct bond or a divalent radical of formula (b)

wherein R₁ is hydrogen or C₁₋₄alkyl, and

Y₁ is the residue attaching to the α-carbon atom of an α-amino acid and optionally protected, -CH₂-CH₂-N(C₁₋₄alkyl)₂, imidazol-2-yl-methyl, benzimidazol-2-yl-methyl, 1H-1,2,4-triazol-3-yl-methyl, pyrazol-3-yl-methyl, indazol-3-yl-methyl or a radical of formula (c) or (d)

$$R_3$$
 or R_4 R_2 R_2 R_3 R_4 R_5

wherein

each of R₂ and R₃, independently, is hydrogen,
halogen, C₁₋₄alkyl, CF₃ or trityl, at most one
of R₂ and R₃ being H, and
each of R₄ and R₅ independently is hydrogen,
C₁₋₄alkyl, hydroxy, C₁₋₄alkoxy, CF₃, phenyl or
halogen, at most one of R₄ and R₅ being H,
or A₃ and A₄ form together a radical of formula (aa)

wherein Y_1 is as defined above and R_1 and R_{1a} form toge-ther $-(CH_2)_m$ - wherein m is 2, 3, 4 or 5, and i) X is a divalent radical of formula (e_1)

$$\begin{array}{c|c}
 & R & O \\
 & N & O \\
 & & CO_3H
\end{array}$$
(e₁)

wherein R_6 is H or C_{1-4} alkyl,

and A_5 is hydrogen; CF_3 ; a radical $-Z_1-Z_2-Y_2$ wherein each of Z_1 and Z_2 independently is a direct bond or an α -amino acid residue and Y_2 is NH_2 , C_{1-4} alkylamino, $di-(C_{1-4}-alkyl)$ amino or a heterocyclic radical attached by a

nitrogen to Z_2 ; a radical $-CH_2-X_1-Y_3$ wherein X_1 is 0 or S and Y_3 is heteroaryl; a radical $-CH_2-Y_3$; or a radical of formulae (k) to (m)

$$-CH_{2}-X_{1}-CO-Y_{4} -CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2}-X_{1}-CH_{2$$

wherein

amino-4-oxo-5-(2,6-dichlorobenzoyloxy) pentanoic acid t.-butyl ester, and (benzyloxycarbonyl-valyl-alanyl)-3S--3-amino-4-oxo-5-(2,6-dichlorobenzoyloxy) pentanoic acid in free form, in salt form or in the form of complexes.

- 7. A process for producing a compound of formula I and the physiologically-hydrolysable and -acceptable esters and amides thereof, as defined in claim 1, which process comprises
 - a) removing at least one protecting group from a compound of formula I in protected form or adding a protecting group R as defined in claim 1 at the N-terminal group of a compound of formula I; or
 - b) converting one compound of formula I into another compound of formula I; or
 - c) coupling together by an amide bond two peptide fragments, each of which contains at least one amino acid in protected or unprotected form and one peptide fragment containing a radical of formula (e₁) to (j) as defined in claim 1, the peptide fragments being such that a protected or unprotected peptide having the sequence according to formula I above is obtained and, if necessary, removing the protecting group or groups from a compound of formula I in protected form; or
 - d) for the production of a compound of formula I wherein X is a radical of formula (e₁) or (h) and A₅ is a radical of formula (k), (l) or (o) or -CH₂-X₁-Y₃ as defined in claim 1, reacting a compound of formula III

$$R - [A_1 - A_2]_n - A_3 - A_4 - X' - CH_2 - Z_a$$
 (III)

wherein R, A_1 to A_4 and n are as defined in claim 1, X' is a radical of formula (e_1) or (h) as defined in claim 1, and Z_a is a leaving group,

with a corresponding phenol, thiophenol or HX_1 -pyridine or an acid of formula HX_1 -CO-Y₄ or a functional derivative thereof or HX_1 -Y₃ wherein X_1 , Y₃ and Y₄ are as defined in claim 1; or

e) for the production of a compound of formula I

wherein R, A_1 to A_5 and n are as defined in claim 1 and R_{16} is a C_{1-12} aliphatic or alicyclic residue, oxidizing a compound of formula V

$$R-[A_1-A_2]_n-A_3-A_4-N \qquad A_5$$

$$CO_2R_1 \in \mathbb{C}$$

wherein R, A_1 to A_5 , n and R_{16} are as defined above,

and recovering a compound of formula I or a physiologically-hydrolysable and -acceptable ester or amide thereof thus obtained in free or salt form or in the form of a complex.

- 8. A compound according to any one of claims 1 to 6 for use as a pharmaceutical.
- 9. A pharmaceutical composition comprising a compound of formula

I as defined in claim 1 or a physiologically-hydrolysable and -acceptable ester or amide thereof, in free form or in physiologically acceptable salt form, together with a pharmaceutically acceptable diluent or carrier therefor.

10. A method for the treatment of disorders with an aetiology associated with or comprising excessive IL-1β release, in a subject in need thereof, which method comprises administering to said subject an effective amount of a compound of formula I as defined in claim 1, a physiologically-hydrolysable and -acceptable ester or amide thereof, or a pharmaceutically acceptable salt thereof.

INTERNATIONAL SEARCH REPORT

tional application No.

PCT/EP 92/02472

ROX I	Coservations where certain claims were found unsearchable (Continuation of ficial 1 of first sheet)
This int	ernational search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely: Remark: Although claim 10 is directed to a method of treatment of the human body, the search has been carried out and based on the alleged effects of the compounds.
2.	Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3.	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This Int	ernational Searching Authority found multiple inventions in this international application, as follows:
-	
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.	As all scarchable claims could be scarches without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
з. 🗌	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.
